Lying graph extended to 2025:

Line width

1978 → 0.5 inches
2025 → 7.5 inches

(7.5 - 0.5) / (0.5) * 100 = 1400

Miles per Gallon

1978 → 18 mpg
2025 → 55.3 mpg

(55.3 - 18) / (18) * 100 = 207.222

1400 / 207.222 = 6.7560394167 ≈ 6.756

Lie factor of 6.756

For the section from ‘85 to ‘11, where there were dips and constants, I chose to get rid of those lines, opting instead to plot only those two years, omitting the middle.

If viewer does not notice line lengths are changing:

Line width

1978 → 0.5 inches
2025 → 0.5 inches

(0.5 - 0.5) / (0.5) * 100 = 0

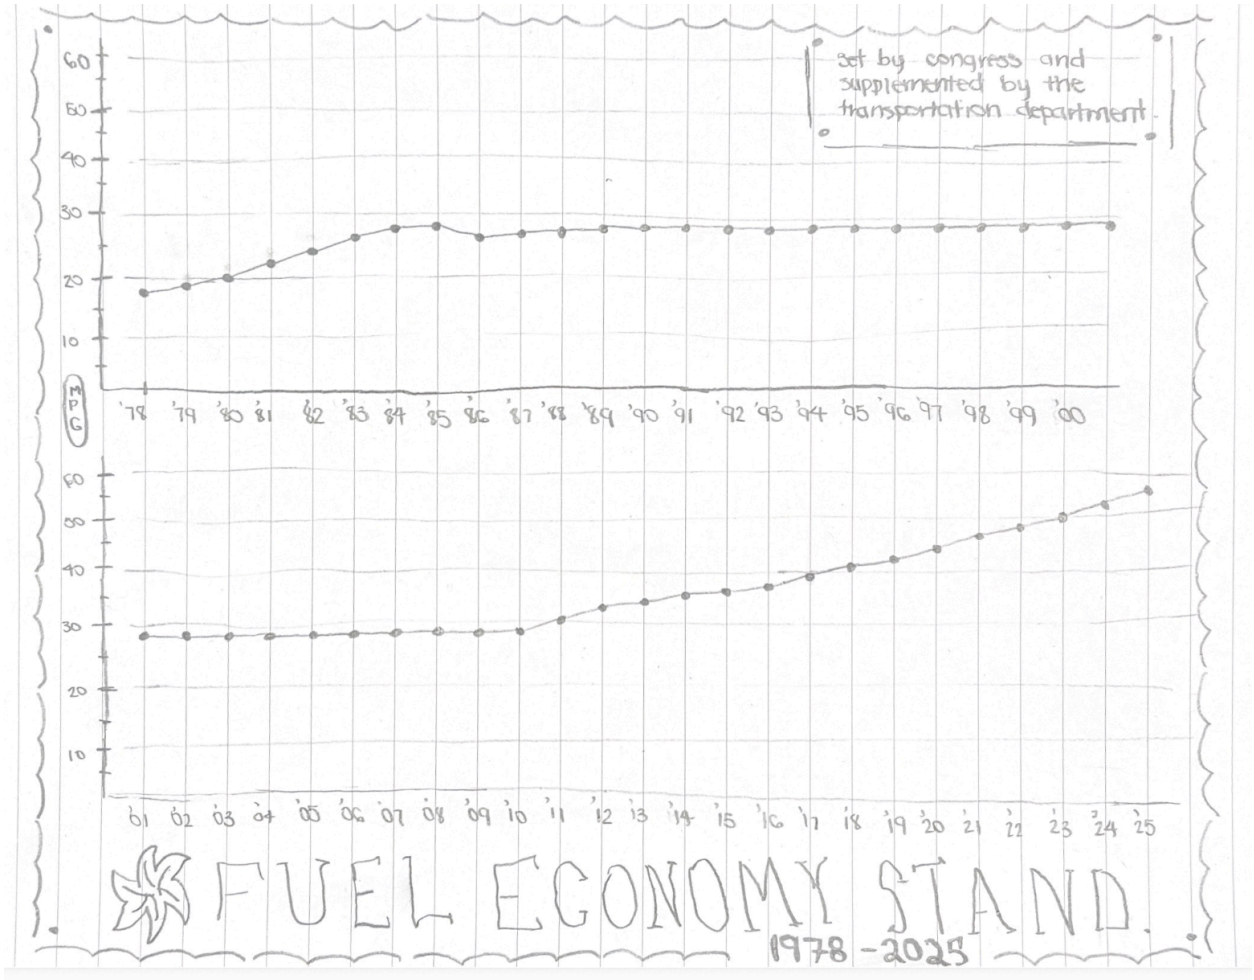

Miles per Gallon

Same as above → 207.222

0 / 207.222 = 0

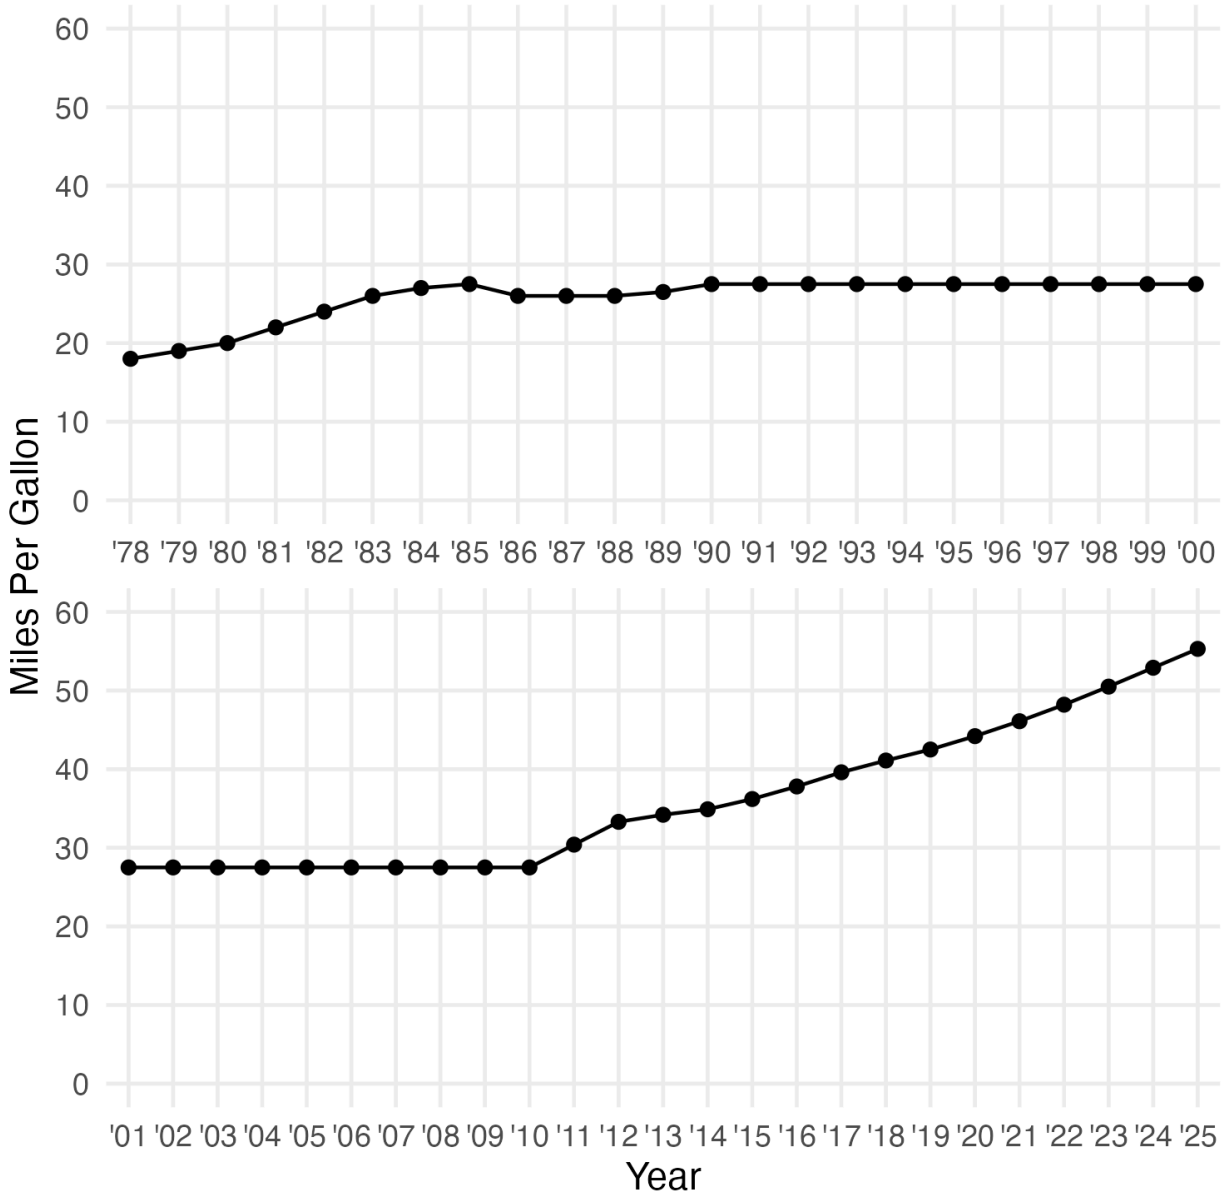

Lie factor of 0

Now, a better graph:

Lie factor of 1.

Now, same graph produced using ggplot:

Lie factor of 1.
